

Miba – Partner to the International Engine and Automotive Industry

Our Company

Miba is a strategic partner to the international engine and automotive industry. It is a family-controlled public company. Approximately one fourth of the share capital is traded on the Vienna Stock Exchange.

The company was founded in 1927 by Franz Mitterbauer. In its early decades it focused on engine repair and cylinder and crankshaft grinding. The Miba brand name was created in 1955, the company went public in 1986, and in 1989 it became a multinational corporation.

Today the Miba Group, headquartered in Laakirchen, Austria (in the state of Upper Austria), is a global player and a world leader in its three strategic business areas: sintered components, engine bearings and friction materials. Extensive investment in research and development has given the company a competitive edge technologically and has enabled Miba to expand its position as a market leader, growing at a faster rate than its competitors.

Miba is a stable partner for customers and investors. The Miba Group funds its plant and machinery investments entirely from cash flow generated. A solid equity ratio of more than 50% ensures its independence.

Products

Sintered Components

Miba Sinter Group is the market and technology leader in the production of a wide range of sintered components and has been a partner to the European automotive industry for decades. Miba's high-strength components are used primarily in passenger car engines, transmissions and shock absorbers.

Engine Bearings

The bearings produced by Miba Bearing Group make modern engines more efficient, more reliable and more environmentally-friendly. They are used in drives for ship, heavy-duty vehicles and locomotives, and in power generation units. In the medium-speed diesel engine segment, Miba is the global market and technology leader for engine bearings.

Friction Materials

Miba Friction Group supplies customers with friction materials for brakes and clutches used in tractors, construction machinery, high-speed trains, motorcycles, airplanes and stationary systems such as wind power stations. Innovative materials and processes enhance efficiency and safety.

Coatings

High Tech Coatings GmbH (HTC) produces specialty polymer gear coatings and supplies the European automotive industry. Since Miba is a strategic partner to the international engine and automotive industry, HTC enhances its competence in the area of highly specialized surface coatings.
