

## Data sheet

# Rotary transfer machine

for production of high volume components

### Description

The rotary transfer machine is designed for rapid, high-volume serial production. Processes such as milling, drilling, turning, grinding etc. can be performed at the same time with highest precision. User-friendly operation and short setup times facilitate flexible and universal production.

### Specifications

Stations:	6 / 12
.....	
Automatic loading/unloading	
Tool breakage detection	
Integrated test stations	
Camera monitoring	
Siemens Sinumerik 840 D SL control system
